SEA DREAMERS

El sistema de climatización ha sido diseñado para encontrar el máximo confort durante todas las épocas del año, contando con suelo radiante mediante conducciones de agua, así como aire acondicionado frío y calor, independiente por estancias, con termostatos inteligentes para poder ajustar la temperatura y/o flujo del aire de las habitaciones de manera independiente.

The heating-cooling system has also been specially designed to provide the maximum comfort during all the different seasons of the year. Underfloor heating by water is fully installed as well as the latest air conditioning hot and cold system with independent smart thermostats.
